

1. Consider the following code, in which some CSS properties and values, indicated by " ", and some HTML tags, indicated by < >, are missing:

```
<!DOCTYPE html>
<html lang="en">
<head>
<title>Trillium Media Design</title>
<meta charset="utf-8">
<style>
body{ background-color: #0066CC;
color: #FFFFFF; }
header {font-family: Arial, sans-serif;}
</style>
</head>
<body>
<header><h1>Trillium Media Design</h1></header>
<p>Our professional staff takes pride in its working relationship with our clients by offering personalized
services that listen to their needs, develop their target areas, and incorporate these items into a website
that works.</p>
</body>
</html>
```

The web page corresponding to the code should be configured so that the background and text colors have good contrast. The header area should use Arial. Fill in the missing code.

2. **Find the Error.** Why won't the page corresponding to the following code display properly in a browser?

```
<!DOCTYPE html>
<html lang="en">
<head>
<title>Trillium Media Design</title>
<meta charset="utf-8">
<style>
body{background-color:#000066;
color: #CCCCCC;
font-family: Arial,sans-
serif; font-size: 1.2em; }
</style>
</head>
<body>
<header><h1>Trillium Media Design</h1></header>
<main><p>Our professional staff takes pride in its working relationship with our clients by offering
personalized services that listen to their needs, develop their target areas, and incorporate these items into a
website that works.</p></main>
</body>
</html>
```

If you write </style> instead of <style> on 11 line one. That file will be works well

3. See Chapter 2 for an introduction to the Path of Light Yoga Studio Case Study. Figure 2.42 shows a site map for the Path of Light Yoga Studio website. The Home page and Classes page were created in Chapter 2. You will develop a new version of this website that uses an external styles sheet to configure text and color. Figure 2.43 depicts the wireframe page layout. You have

the following tasks:

Task1.Create anew folderforthis Pathof Light YogaStudiocasestudy.

Task 2. Create an external stylesheet named `yoga.css` that configures the color and text for the Path of Light Yoga Studio website.

Task 3. Modify the Home page to utilize an external stylesheet to configure colors and fonts.

The new Home page and color swatches are shown in Figure 3.35.

Task 4. Modify the Classes page to be consistent with the new Home page. Task

5. Configure centered page layout.

Hands-On Practice Case Study

Task1: Create a folder on your hard drive or portable storage device called `yogacss`. Copy all the files from your Chapter 2 yoga folder into the `yogacss` folder.

Task2: The External Style Sheet. You will use a text editor to create an external style sheet named `yoga.css`. Code the CSS to configure the following:

- 1) Global styles for the document (use the body element selector) with background color `#F5F5F5`; text color `#3F2860`; and Verdana, Arial, or any sans-serif font.
- 2) Styles for the header element that configure background color `#9BC1C2` with centered text.
- 3) Styles for the `h1` element selector that configure 200% line height.
- 4) Styles for the `nav` element selector that configure centered and bold font.
- 5) Styles for the anchor elements within the `nav` area to eliminate the default underline (Hint: use the `nav a` selector).
- 6) Styles for a class named `studio` that configure italic text.
- 7) Styles for the footer element selector with `#9BC1C2` background color, small font size (.60em), and italic, centered text.

Save the `easyyoga.css` in the `yogacss` folder. Check your syntax with the CSS validator (<http://jigsaw.w3.org/css-validator>). Correct and retest if necessary.

Task3: The Home Page. Launch a text editor, and open the `index.html` file. You will modify this file to apply styles from the `yoga.css` external style sheet.

- 1) Add a `<link>` element to associate the web page with the `yoga.css` external style sheet file.
- 2) Configure the navigation area. Remove the `<b>` element from the navigation area, because the CSS will configure the bold font style.
- 3) Look in the main content area for the company name ("Path of Light Yoga Studio") and configure a `span` element to contain this text each time it appears. Assign each `span` element to the `studio` class.
- 4) Configure the page footer area. Remove the `<small>` and `<i>` elements—they are no longer needed since CSS is now used to configure the text.

Save the `index.html` file, and test in a browser. Your pages should look similar to the one shown in Figure 3.35.

Task 4: The Classes Page. Launch a text editor, and open the `classes.html` file. You will modify this file in a similar manner: Add the `<link>` element, configure the navigation area, and configure the page footer area. Save and test your new `classes.html` page. It should look similar to the one shown in Figure 3.36.

Figure 3.36 New classes.html page

Task5:CenterPageLayoutwithCSS. Modifyyoga.css,index.html,andclasses.htmltoconfigurepage content that is centered with 80% width. Refer to Hands-On Practice 3.9 if necessary.

- 1) Launchatexteditor,andopen the yoga.cssfile.Add astyleruleforanidnamed wrapper with width set to 80%, margin-right set to auto, and margin-left set to auto.
- 2) Launchatexteditor, andopen theindex.htmlfile.AddtheHTMLcodetoconfigureadivelement assigned to the id wrapper that “wraps,” or contains, the code within the bodysection. Save and test your index.html page in a browser and you’ll notice that the page content is now centered within the browser viewport as shown in Figure 3.35.
- 3) Launch a text editor, and open the classes.html file. Add the HTML code to configure a div element assigned to the id wrapper that “wraps,” or contains, the code within the body section. Saveandtestyourclasses.htmlpageinabrowserand you’ll notice that the page content is now centered within the browser viewport as shown in Figure 3.36

Experimentwithmodifyingthe yoga.css file.Changethepagebackgroundcolor,thefont family,andso on. Test your pages in a browser. Notice how a change in a single file can affect multiple files when external style sheets are used.
