

ECC006 Homework Assignment #7

1. How would you link to the named fragment #jobs on the page employ.html from the home page of the site?

- a. `<a href="employ.html#jobs">Jobs</a>`
- b. `<a name="employ.html#jobs">Jobs</a>`
- c. `<a link="employ.html#jobs">Jobs</a>`
- d. `<a href="#jobs">Jobs</a>`

2. Which pseudo-element can be used to generate content that precedes an element?

- a. `:after`
- b. `:before`
- c. `:content`
- d. `:first-line`

3. Which of the following is a mobile web design best practice?

- a. Configure a multiple-column page layout.
- b. Avoid using lists to organize information.
- c. Configure a single-column page layout.
- d. Embed text in images wherever possible.

4. Find the Error. The page below is intended for the navigation area to display on the right side of the browser window. What needs to be changed to make this happen?

```
<!DOCTYPEhtml>
<html lang="en">
<head>
<title>Find the Error</title>
<meta charset="utf-8">
<style>
body{background-color:#d5edb3; color:
#000066;
font-family:Verdana, Arial, sans-serif;}
nav { float: left;
width: 120px; }
main {padding:20px150px20px20px;
background-color: #ffffff;
color:#000000; }
</style>
</head>
<body>
<header role="banner">
<h1>Trillium Media Design</h1>
</header>
<nav role="navigation">
<ul>
```

```

<li><a href="index.html">Home</a></li>
<li><a href="services.html">Services</a></li>
<li><a href="contact.html">Contact</a></li>
</ul>
</nav>
<main role="main">
<p>Our professional staff takes pride in its working relationship with our clients by offering
personalized services that listen to their needs, develop their target areas, and incorporate these items
into a website that works.</p>
</main>
</body>
</html>

```

Correct version

```

<!DOCTYPE html>
<html lang="en">
<head>
<title>Find the Error</title>
<meta charset="utf-8">
<style>
body { background-color: #d5edb3;
color: #000066;
font-family: Verdana, Arial, sans-serif; }
nav { float: right;
width: 120px; }
main { padding: 20px 150px 20px 20px;
background-color: #ffffff;
color: #000000; }
</style>
</head>
<body>
<header role="banner">
<h1>Trillium Media Design</h1>
</header>
<nav role="navigation">
<ul>
<li><a href="index.html">Home</a></li>
<li><a href="services.html">Services</a></li>
<li><a href="contact.html">Contact</a></li>
</ul>
</nav>
<main role="main">
<p>Our professional staff takes pride in its working relationship with our clients by offering
personalized services that listen to their needs, develop their target areas, and incorporate these
items into a website that works.</p>
</main>
</body>
</html>

```

Web research

As you read about mobile web design best practices in this chapter, you may have noticed some overlap with techniques that provide for accessibility, such as alternate text and use of headings. Explore the Web Content Accessibility and Mobile Web document at <http://www.w3.org/WAI/mobile>. Explore related links that interest you. Write a one-page, double-spaced summary that describes areas of overlap and how web developers can support both accessibility and mobile devices.

Good mobile web design and web accessibility are very similar. Accessibility rules (called WCAG 2.2) apply to both mobile websites and mobile applications. The biggest link between them is the four main rules, also known as POURs. These rules ensure that everyone can use websites on any device.

Perceptible (Easily seen and heard): Good color contrast, enlarged text and video subtitles help people with visual impairments. It also helps people using phones outdoors in bright sunlight or on small screens.

Operable (Easy to use): Buttons should be large enough to be easily touched. On-screen touches and scrolls should be simple, and zooming should be possible. This helps people with difficulty moving their hands and makes holding and using phones easy for everyone.

Understandable (Easily comprehensible): Menus should always be in the same place on every page. The website should immediately notify you when you click something. The screen should work whether you hold your phone normally or horizontally. This way, users won't get confused. **Robust (Works well everywhere):** Website design should adapt perfectly to every screen size. It should also work well with phone features like voice control and screen readers (programs that read text aloud to blind users).

Web developers can support both mobile users and people with disabilities by planning for different screen sizes from the outset. They should add text descriptions ("alt text") to images, use clear headings, and always test their websites with screen readers.

Accessibility guidelines state that text should fit on the screen without requiring people to scroll left or right. This is something a good mobile website should already do.

By following these standard guidelines, developers create websites that are easy for everyone to use, including people with disabilities. Doing so helps the website comply with legal regulations. It also helps the website rank better on Google and encourages visitors to return.
